Allowable Subject Matter

Claims 1 and 138-181 are allowed.

The following is an examiner's statement of reasons for allowance: although the prior art of record cited below discloses partitioning a RTL netlist between a plurality of ICs, the prior art of record does not disclose or teach or provide sufficient motivation for partitioning a technology independent RTL netlist between a plurality of ICs which includes a first IC to be implemented in a first vendor specific technology and a second IC to be implemented in a second vendor specific technology.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. W.-J. FANG et al. disclose partitioning a design onto a set of FPGAs. E.D. LAGNESE et al. disclose architectural partitioning, including mention that the partitions can be implemented on off-the-shelf microprocessors. M. VOOTUKURU et al. disclose partitioning RTL designs on multiple FPGAs, including mention that the system can be extended to heterogeneous FPGA targeting. However, none of the references adequately describe the plurality of ICs to be implemented in first and second vendor specific technologies.
